The description of the model given in this manual is based on the specifications at the time of writing. This manual covers all existing functions for the model described.

CHAPTER 1 INTRODUCTION

The Anger/Dislike Detector of Beyond Verbal takes raw voice input and analyzes it for mood and emotional state.

- The Anger/Dislike Detector detects whether the speaker feels anger/dislike or not. It requires at least 10 seconds of authentic speech to render the initial emotional analysis. All subsequent analyses are rendered every 5 seconds. For more information, please refer to our recording guidelines.

CHAPTER 2 ANGER/DISLIKE DETECTOR OUTPUT

The output of the detector is distributed into 2 values: "Yes" (Anger/Dislike) and "No" (No Anger/Dislike). The meaning of each value is listed below within this document.

2.1 "YES": ANGER/DISLIKE

Anger/Dislike output ("Yes") occurs when the speaker experiences and expresses negative and antagonistic emotions oriented outwards, such as anger, hatred, annoyance, dislike, disgust and contempt. These emotions involve active approach and are usually characterized by high arousal, though in some cases the arousal can be neutral.

2.2 "NO": NO ANGER/DISLIKE

No Anger/Dislike output ("No") occurs when the speaker doesn't experience and express negative and antagonistic emotions oriented outwards such as anger and dislike.
